

moments

Don't scroll it. Live it.

Every piece of content is an invitation to move.

Moments is built against the thing every other social app is built for. The feed is not the product; the day you actually have is the product. Everything in the app either gets you somewhere, gets you to someone, or gets out of the way.

What we are

A map of people who are actually around. A camera that opens in one tap. Conversations that don't pile up forever. Games you play with someone rather than at them.

What we are not

An infinite feed. A metrics dashboard for your friendships. A place that measures how long it kept you.

The line

Don't scroll it. Live it.

The tagline is a sentence, with a full stop, always. It is never set in all caps, never turned into a hashtag, and never translated loosely — each locale has its own approved wording.

One mark, one wordmark.

The app mark is a purple tile carrying a lowercase **m** and a gold dot. The wordmark is **moments**, lowercase, with the gold spark above it. They are the same family: the dot and the spark are the same idea — the small bright thing that makes an ordinary moment worth keeping.

Clear space & minimum size

Keep clear space equal to the height of the **m** on every side. Nothing sits inside it — no text, no rules, no other logos.

Minimum sizes

App mark, screen	24 px
App mark, print	8 mm
Wordmark, screen	96 px wide
Wordmark, print	25 mm wide

Below these the gold dot and the spark stop reading, and the mark loses the thing that makes it ours.

What not to do.

The mark exists as artwork. It is never redrawn, re-coloured or set in a typeface — including by us. An earlier build of the app invented its own version with a capital M; this page exists so that doesn't happen twice.

✗ Never redraw it in a font

✗ Never remove the colour

✗ Never rotate or tilt it

✗ Never stretch it

✗ Never place it on a busy colour

✗ Never recolour the tile

One violet does the work.

Violet is the brand. Gold, coral, green and blue are not decoration — each one means something, and using them for anything else takes the meaning away. If a colour on screen isn't saying one of these things, it should be ink, dim or a hairline.

Core

Violet

#7C3AED

The brand. Primary buttons, active state, the mark.

Gold

#F5B301

The star reaction, and the spark. Delight only.

Ink

#111827

Text. Near-black, never pure black.

Canvas

#F4F5F7

The light background. Cloud-grey, never white.

Meaning colours

Coral

#F43F5E

Live, urgent, SOS, leaving. Never a default button.

Green

#10B981

Confirmed, online, safe, accepted.

Blue

#3B82F6

Groups and squads. Translation.

Night

Dark mode is not the light palette inverted. The canvas goes near-black, cards sit barely lifted off it, outlines become hairlines, and the accents brighten so they still carry on a dark ground.

Night canvas

#0B0B0E

The dark background.

Night card

#18181C

Barely lifted off the canvas.

Night violet

#7C5CFF

Brightened so it still reads.

Gold

#F5B301

Unchanged — it carries on both.

Contrast. Body text holds at least 4.5:1 against its background in both themes; anything smaller than 14 px holds 7:1. A colour that fails this is not used for text, whatever it looks like.

The system typeface, used with conviction.

Moments sets everything in the platform's own interface font — San Francisco on Apple devices, Roboto on Android, Segoe on Windows. It is a deliberate choice, not a shortcut: it renders faster than anything we could ship, it is the face people already read all day, and it carries Arabic, Cyrillic, Chinese, Japanese and Korean without a second file. Thirteen languages ship today.

Screen title

900 · 26–34px · tight

Section heading

900 · 17–19px

Row label · a name, a place

800 · 14–15px

Body. What something is, said plainly, in as few words as it takes.

400–600 · 13–14px · 1.45

Quiet detail — a timestamp, a hint, a count

700 · 11–12px · dimmed

KICKER ABOVE A TITLE

900 · 10px · 1.6 tracking

Rules

- Weight carries hierarchy, not size. Two sizes and two weights beat four sizes.
- All caps is only ever the kicker. Never a sentence, never a button.
- Numbers that change — counts, timers — are tabular so they don't jitter.
- Arabic is never italicised and never letter-spaced.

Say the true thing, in the fewest words.

Moments talks like a straight friend, not a brand. It admits when something failed, it never pretends something worked, and it never performs enthusiasm it doesn't have. Emoji are punctuation, not personality.

WE SAY

"That did not send — you are NOT showing as needing help."

"The upload stopped moving at 76%. Your connection dropped out."

"Nobody in here yet. Find someone on the map, or start one from here."

"Keep it clothed."

"Nothing was lost. Close it and have another go."

WE DON'T

"Oops! Something went wrong 😊"

"Upload failed. Please try again later."

"No conversations yet!"

"Please adhere to our community guidelines."

"We're working hard to fix this!"

Four rules

- **Name the thing.** "48MB, the limit is 48" — not "file too large".
- **Say what to do next.** Every error ends with an action, or it isn't finished.
- **Never take credit for a failure.** No "we're on it", no "we apologise for the inconvenience".
- **Don't lecture.** A rule is stated once, plainly, before it's broken — not moralised after.

Arabic. Egyptian colloquial, not Modern Standard — the app is spoken, not announced. It is written for someone reading on a phone at midnight, not for a press release.

A door, not a performance.

Animation exists to explain where something came from and where it went. The second time someone sees an animation they only want it to be over, so every duration here is the shortest one that still reads.

MOMENT	IN	OUT	CURVE
App opening	440ms	220ms	out-cubic / in-cubic
Sheet up from the bottom	280ms	200ms	out-cubic
Tap feedback	90ms	120ms	out-quad
Screen to screen	300ms	240ms	platform default
Live pulse (SOS, recording)	700ms loop		in-out-quad
Ambient float (map pins)	3.2s loop		in-out

- Nothing bounces. Overshoot reads as a toy.
- Anything that loops is slow enough to ignore — a loop you notice twice is too fast.
- An animation is never allowed to delay an action. It plays over the result, not before it.
- An opening that gets cut off mid-way is worse than none: it either finishes or it never started.

Round, quiet, one accent.

The house radius

20px — cards, sheets, panels

16px — inner controls

999px — chips & primary buttons

Three radii, and no others. A fourth is how an interface starts looking assembled rather than made.

Buttons

Primary — one per screen

Ghost — the way out

Destructive — says what it destroys

One primary button per screen. If two things look equally important, neither is.

Spacing

A 4px base. Real spacing is 8 / 12 / 16 / 22 / 34. Touch targets are never under 44 px, including the ones that look small.

Depth

Light mode lifts things with soft shadow on a grey canvas. Night mode does not — it separates with hairlines, because shadow on near-black is mud. The same screen is built twice, not tinted once.

Five things we don't trade away.

1. **Nothing fake.** No placeholder people, no invented counts, no scripted activity. An empty app looks empty, and says so warmly.
 2. **Never leave a blank screen.** A blank rectangle is indistinguishable from a broken app. Something always says what is happening and how to get out.
 3. **Failure is told, not swallowed.** If it didn't send, the person hears the real reason in their own words, not ours.
 4. **Nothing borrowed.** Every character, every sticker, every piece of art in the app is drawn by us. No copyrighted clothing, no other app's avatars.
 5. **Structure over policing.** Safety comes from what the app makes impossible, not from what it scolds you for afterwards.
-

Don't scroll it. Live it.

If a decision doesn't serve that sentence, it isn't a Moments decision.
